

Are you driven by the ability to work and develop in a fast-paced environment, learn rapidly and master diverse web technologies? Keep on reading because we're hiring:

Backend Web Developer

Currently, we are looking for candidates to fill a Backend web developer position. The position focuses on creating and maintaining web services that interact with a complex database, and we're looking for a competent ambitious individual to join our team and work on challenging international projects.

Responsibilities and tasks include:

- Developing new solutions and features and improving existing systems
- Solving problems in a competent and collaborative environment
- Writing well-designed, testable, efficient code
- Gathering specifications and requirements based on technical needs
- Cooperating closely with Project/Product Management, UX Designers etc.
- Handling multiple tasks within the constraints of timelines and budgets

Requirements expected:

- Experience with Laravel, WordPress and Vue.JS, however at least 2 year of experience working on the Web with PHP and JS is fine as long as you have the will to learn a new stack
- Degree in computer science; however, your experience and proven skills are more important
- At least two web app under your belt
- Experience with other JavaScript front end frameworks is a bonus but not necessary
- Excellent knowledge of PHP/JS and in-depth understanding of HTML/CSS
- Comprehension of Object-Oriented Programming, design patterns and web application development
- Keeping up with latest web development news and technologies

What we offer:

- Modern workstation in Zagreb, Varaždin or Osijek
- Flexibility working schedule and possibility to work from home
- Competitive salary dependent upon experience
- Interesting and innovative projects in various domains
- Nice colleagues willing to help
